

Applied Energy Symposium MIT A+B 2024

Co-organized with HARVARD Aug. 12-15, 2024 • MIT, Boston, USA

Welcome

Welcome to the Applied Energy Symposium: MIT A+B.

The IPCC report "Global Warming of 1.5°C" (Oct. 2018) issued a dire warning that unless CO₂ emissions are halved by 2030, devastating changes, which will be sooner than expected and irreversible, will occur in ocean and on land. Time is running out for transitioning to new energy systems globally. Logic and numbers show that the world must take a two-step approach: (A) deploy existing, industrially proven technologies, namely solar, wind and nuclear base load at an unprecedented scale and pace, from now to 2050 -- when a house catches fire, firemen must run to the closest hydrants and stop disputing which water stream would be purer; and (B) develop new concepts and technologies that may replace the dirtier parts of (A) post-2050, at terawatt scale.

The Applied Energy Symposium: MIT "A+B" (MITAB) is dedicated to the accelerated deployment of (A), and new concepts and emerging technologies for (B). For (A), reducing capital and operating costs, managing social dynamics, and minimizing environmental impact while maintaining extreme productivity are key; automation, artificial intelligence, social mobilization, governmental actions and international coordination will provide essential boosts. For (B), we seek new concepts and emerging technologies (e.g. fusion power engineering, superconducting transmission, etc.) that stand a chance to scale to terawatts after 30 years, i.e. "baby technologies" can grow to adulthood in 20-30 years. The MIT A+B is organized by Massachusetts Institute of Technology, Harvard University, and Applied Energy Innovation Institute (AEii) jointly.

We look forward to meeting you online.

Chairs of MITAB2024

Prof. Ju Li Massachusetts of Institute of Technology Prof. Michael J. Aziz Harvard University Prof. Jerry Yan Editor-in-chief of Advances in Applied Energy and Nexus

Program at a Glance

	Day 0: 2:00 PM - 6:00 PM, Monday, Aug 12, MIT Stata Center 1 st Floor			
14:00 -18:00	Registration			
	Day 1: 8:30 AM - 8:00 PM, Tuesday, Aug 13, MIT Stata Center			
8:30 -8:35	Chair Welcome & Opening Remarks			
8:35-9:25	Reactive Carbon Capture			
9:25-10:15	Energy and Environmental Justice: Theory and Action			
10:15-10:40	Coffee/Tea Break & Group Photo			
10:40-11:30	Cellulosic Biofuel 2.0			
11:30-12:20	Nuclear-Energy Heat Hydrogen and Electricity for Large-Scale Mining and Billion-ton Negative Carbon Emissions			
12:20-13:30	Lunch Break			
13:30-17:45	Carbon Emission and Storage			
13:30-16:45	Hydrogen and Energy Storage			
13:30-18:05	Energy Management, Policy and Economic 1			
18:00-20:00	Dinner Reception (MIT Stata Center, Forbes Cafe)			
	Day 2: 8:30 AM - 6:05 PM, Wednesday, Aug 14, MIT Stata Center			
8:30-11:30	Carbon Capture and Utilization			
8:30-12:45	Green Building & Electric Vehicle			
8:30-12:05	Distributed Energy System & Network			
11:45-13:30	Lunch Break			
13:30-17:40	Energy System & Network			
13:30-16:50	Intelligent Energy			
13:30-18:05	Energy Management, Policy and Economic 2			
	Day 3: 8:10 AM - 12:45 PM, Thursday, Aug 15, MIT Stata Center			
8:30-12:25	Renewable Energy			
8:30-12:25	Energy Management, Policy and Economic 3			

Plenary Keynotes

Plenary Keynotes

Aug. 13 (Tues) 8:30-12:00AM: MIT Stata Center, Room 123

Curtis P. Berlinguette Professor University of British Columbia

Reactive Carbon Capture

Carbon capture and utilization schemes require that CO_2 captured from the atmosphere (or a point source) be released from the sorbent, and that the sorbent be recycled to capture additional CO_2 . Alkaline solutions such as KOH are effective at capturing CO_2 through reactions that form (bi)carbonates, but the recovery of CO_2 gas and hydroxide before CO_2 electrolysis requires energy-intensive steps. We solved this problem by designing an electrochemical reactor that converts bicarbonate "reactive carbon capture solutions" into carbon-containing products. In this presentation, I will show how this reactor couples CO_2 conversion with upstream carbon capture. Not only does this reactor bypass the expensive step of liberating CO_2 from the sorbent, but it can also perform better than the reactors fed with gaseous CO_2 .

Daniel M. Kammen Professor University of California, Berkeley

Energy and Environmental Justice: Theory and Action

With anthropogenic climate change now impacting infrastructure, biodiversity, and energy system design worldwide, new approaches are needed that mix mitigation and adaptation with a very intentional approach to the unequal burdens that affluent and marginalized communities face. This new nexus, 'the Just Energy Transition' is widely discussed, but far less often quantified, and rarely made the central theme in data collection, impact assessment, and proactive science, engineering, public policy, and social justice initiatives. In this talk we review the state of technical and policy approaches to climate justice, and examine how new energy-water-climate-community efforts can lead to lower cost, higher reliability infrastructure design that promotes not only climate-smart, but also community empowering energy policies in the greenhouse. We draw from work in California, the US, and East Africa to make these policies and energy systems design principles concrete.

Plenary Keynotes

Lee R. Lynd Professor Dartmouth College

Cellulosic Biofuel 2.0

Cellulosic biofuels fell short of expectations over the last decade but have potential to play a major role as part of the sustainable energy transition. Perspectives will be offered pursuant to configuring Cellulosic Biofuel 2.0 for success, including:

• The need for cellulosic biofuels as key components of the sustainable energy transition, with an emphasis on negative emissions.

• Graceful land use strategies, in particular for avoiding land competition and enhancing the cost effectiveness and sustainability of food and feed production.

• Consolidated bioprocessing (CBP), a technology with potential to enable costcompetitive conversion of cellulosic biomass to fuels for light and heavy-duty transport applications.

• Terragia, a recently formed startup aiming to commercialize CBP.

Charles W. Forsberg Professor Massachusetts of Institute of Technology

Nuclear-Energy Heat Hydrogen and Electricity for Large-Scale Mining and Billion-ton Negative Carbon Emissions

In a low-carbon world, the mining industry may consume 20% of global energy production. Today the mining industry moves minerals (iron ore, copper, etc.) from hard rock basins long distances to sedimentary rock basins containing fossil fuels. The fossil fuels chemically convert ores into metals such as iron and copper using technologies such as blast furnaces. Take away fossil fuels favors the conversion of ores to metallic iron and copper at the mine site. Nuclear energy can provide at remote sites the required heat, hydrogen and electricity. The hydrogen would be used to fuel mine trucks, direct reduction of iron ore to iron thus replacing coal as a chemical reducing agent and direct reduction of other oxide and sulfide ores to metals. Electricity is required to grind rock. The largest future mining market may be mining and grinding basalt to add as a fine sand to soils and the ocean to remove carbon dioxide (CO_2) from the atmosphere. The calcium and magnesium oxides in the rock react with atmospheric CO2 to ultimately produce carbonates—the same weathering process the earth uses to remove CO_2 from the atmosphere. Some combination of heat, electricity and hydrogen can provide the heat for cement production.

Energy System & Network

Afternoon, Wednesday, August 14

Location: MIT Stata Center, Room 141

Session Chairs: Wei He, Fábio Silva

Time	I.D.	Authors	Title	
1:30 - 2:05 PM	256	Tugce Baser (Keynote Speaker) , Josiane Jello, Katherine Nieto, Andrew Stumpf, Ana Morton Riviera, Andrew Barbeau and Nuri Madina	A Community-Scale Geothermal Network in Chicago	
2:05 - 2:40 PM	342	Wei He (Keynote Speaker)	Energy storage and flexible technologies for renewable integration and sustainability	
2:40 - 3:00 PM	322	Atmanandmaya, Loganathan Umanand, Reddy B Subba and Wei He	Analysis and Application of Peltier Module for Surface Temperature Measurement in Hybrid Source Thermal Desalination System by Module Parameter Estimation	
3:00 - 3:20 PM	140	Atmanandmaya, Loganathan Umanand and Reddy B Subba	Development of a Coupled Thermal-Electrical Circuit Model for Peltier device in heat pump application for desalination systems	
3:20 - 3:40 PM		Coffee/Tea Break		
3:40 - 4:00 PM	244	Qiang Zhou and Tao Jin	Experimental investigation of a phase-change thermofluidic oscillator with pumping line for low-grade heat recovery	
4:00 - 4:20 PM	266	Arvind Srinivasan, Paolo Gabrielli and Giovanni Sansavini	Net emission reductions from community-scale multi- energy systems: a global analysis	
4:20 - 4:40 PM	279	Sheng Lun Cao, W. Neal Mann, Zhi Zhou, Jonghwan Kwon, Todd Levin and Destenie Nock	Impact Assessment of Representative Period Selection on Texas ERCOT Capacity Expansion Planning for the Mid- and End-of-Century	
4:40 - 5:00 PM	326	Sandeep Yadav, Srinivas Seethamraju and Rangan Banerjee	Techno-Economic Assessment of a Satellite LNG Regasification System Utilizing LNG Cold Energy for Cold Warehouse Facilities	
5:00 - 5:20 PM	201	Dieudonné Ecike Ewanga	Multi-state system reliability modeling. Extended Markov model in the presence of distributed production	
5:20 - 5:40 PM	222	Xiaowen Kang	Differential Analysis of Evolutionary Paths in Energy Systems Networks Based on the Roll Principle	

Intelligent Energy

Afternoon, Wednesday, August 14

Location: MIT Stata Center, Room 144

Session Chairs: Amos Oppong, Rahman Khorramfar

Time	I.D.	Authors	Title
1:30 - 1:50 PM	253	Amos Oppong, Nana Ama Bimpomaa Oti, Frederick Ofosu Oduro and Kingsley Nketia Acheampong	Towards Proposing Data-Driven Emission Mitigation Pathways for Ghana: The Role of Using Big Data and Artificial Intelligence to Minimizing Errors
1:50 - 2:10 PM	261	Jing Zhang, Zhe Chen, Tianyou Ma, Kan Xu and Fu Xiao	Al-empowered Digital Twin for Smart Building <u>Management</u>
2:10 - 2:30 PM	267	Subhash Kumar and Padraig Lyons	Optimizing energy generation mix for a power system by considering twin challenge of electrification of heat, transport and industry and new data centers in <u>Ireland</u>
2:30 - 2:50 PM	290	Mohammad Seyfi, Behnam Mohammadi-Ivatloo, Jamshid Aghaei, Morteza Vahid-Ghavidel and Rahman Khorramfar	Deep Reinforcement Learning-mixed integer programming for energy management of prosumers in sector coupling
2:50 - 3:10 PM	310	Bin Wang	A Comparison of Deep Learning-Based Object Detection for Unmanned Aerial Vehicle
3:10 - 3:30 PM	329	Samuel Miles, Ryan McCord, Layla Kwong and Daniel Kammen	Internet of Things could shape healthcare facility electrification: Evidence from the Democratic <u>Republic of the Congo</u>
3:30 - 3:50 PM		Cof	fee/Tea Break
3:50 - 4:10 PM	334	Hongjun Tan, Zhiling Guo, Zhengyuan Lin, Yuntian Chen, Haoran Zhang and Jinyue Yan	Enhancing Urban PV Potential Assessment through General Generative AI-based Remote Sensing Image Synthesis
4:10 - 4:30	269	Zhe Song and Fu Xiao	Probabilistic short-term forecasting of photovoltaic power using hybrid boosting machine learning based on numerical weather prediction
4:30 – 4:50	252	Wenchao Shi, Xiaochen Ma and Hongxing Yang	Achieving cooling carbon neutrality by PV-powered hybrid natural cooling approach for data centers in hot and humid regions

Energy Management, Policy and Economic 2

Afternoon, Wednesday, August 14

Renewable Energy

Morning, Thursday, August 15

Location: MIT Stata Center, Room 141

Session Chairs: Aimé Fournier, Ju Li

Time	I.D.	Authors	Title
8:30 - 9:05 AM	340	Aimé Fournier (Keynote Speaker),	Analysis and simulations aimed at electrical
0.30 - 9.03 AM	340	Laurent Demanet and Paris Smalls	fracturing for enhanced geothermal systems
		Chenglong Cao, Gang Lin, Jingying	Capacity allocation optimization method for a
9:05 - 9:25 AM	41	Fu and Ziqiang Bu	Photovoltaic-Pumped Hydro Storage system from
		Fu and Ziqiang Bu	abandoned coal mine
		Mabruk Adams, Yuyin Wang and	Operational mode and powdered activated carbon
9:25 - 9:45 AM	200	Bang Du	promoting syntrophic propionate oxidation during
		Daily Du	anaerobic digestion of complex organic substances
		Beenish Saba, Thaddeus Ezeji and	Bioenergy from Food Waste Fermentation: A
9:45 - 10:05 AM	249	Katrina Cornish	comparison of Conventional and Electro-
		Natima Comisii	Fermentation
10:05-10:25 AM	257	Josiane Jello, Katherine Nieto,	Numerical Investigation of Thermal Interference in
10.03-10.23 AW	201	Andrew Stumpf and Tugce Baser	Adjacent Geothermal Systems
10:25-10:45 AM	Coffee/Tea Break		
		Subhash Kumar, Padraig Lyons,	Exploring Potential Geothermal District Heating
10:45-11:05 AM	262	Aoife Braiden and Rory Dunphy	areas by using GIS and Multi Criteria Decision
		Note Dialden and Noty Darphy	Analysis Methodology in Ireland244
11:05-11:25 AM	288	Remo Schäppi and Aldo Steinfeld	Thermochemical fuel production from sunlight and air
		Peter Scott, Remo Schäppi, Aniket	Design & Modeling of an Indirectly Irradiated Solar
11:25-11:45 AM	303	Patankar, Ziyao Wu and Ahmed	Thermochemical Hydrogen Reactor for use in a
		Ghoniem	Reactor Train System
11:45-12:05 AM	333	Owen Wang and Xiaotu Ma	Innovating the Recycling of Solar Panels with an
11. 4 0-12.00 AM	000		Eco-friendly Alkaline Leaching Process
		Zilong Zhao, Guoquan Lv, Yanwen	A <u>Reliability-Based and Stochastic Optimization for</u>
12:05-12:25 AM	12:05-12:25 AM 235	Xu and Pingfeng Wang	Balancing Capacity and Uncertainties in a Roof-
			Mounted Photovoltaic (PV) System

Energy Management, Policy and Economic 3

Morning, Thursday, August 15

Location: MIT Stata Center, Room 155

Session Chairs: Ivan Endara, Emily Liu

Time	I.D.	Authors	Title
8:30 - 9:05 AM	198	Robert Kleinberg (Keynote	Problems with Greenhouse Gas Life Cycle Analyses of
		Speaker)	U.S. LNG Exports and Locally-Produced Coal
9:05 - 9:25 AM	79	Florian Siekmann and Sandra	Agree to Disagree – Striving for Consensus in Regional
		Venghaus	Energy Transitions in Germany
9:25 - 9:45 AM	231	Xiaoyu Lin, Shengwei Wang and Kui Shan	Short-term Chiller Plant Control Strategies Utilizing
			Intrinsic Thermal Storage under Real-time Tariffs
			<u>changes</u>
9:45 - 10:05 AM	237	Sandra Venghaus, Sebastian	
		Lubjuhn, Florian Siekmann,	Proactive Policy Advice - The Potential of Machine
		Rega Sota and Ali Ebadi	Learning for Predictive Policy Scenario Generation
		Torkayesh	
10:05-10:25 AM	276	Rahman Khorramfar, Ayse	The Role of Pumped-hydro Energy Storage in a Power
		Selin Kocaman and Beste	System with Large Renewable Penetration and
		Basciftci	<u>Uncertainties</u>
10:25-10:45 AM	Coffee/Tea Break		
10:45-11:05 AM	285	Yixi Tian	Processing and Beneficial Uses of Waste-to-Energy
			Residues in Civil Engineering Applications
11:05-11:25 AM	286	Bryan Higgins, Lincoln Pratson and Dalia Patiño-Echeverri	Critical Assessment of Repurposing Oil & Gas Wells for
			Enhanced Geothermal Systems Based on Wells in New
			<u>Mexico, USA</u>
11:25-11:45 AM	330	Alexandra Grayson, Felix	Equity in the Expanding US Clean Energy Workforce: A
		Askenberger, Samuel	Review and Application to the Marine Renewable Energy
		Kuersteiner and Daniel	Sector
		Kammen	3600
11:45-12:05 AM	311	Yanqi Chen, Ji Zhang, Ding	Thermo-economic assessments of pumped thermal
		Wu, Yan Yang and Chuang	electricity storage systems using supercritical carbon_
		Wen	dioxide as the working fluid
12:05-12:25 AM	211	Kui Shan	Development and Implementation of Optimal Control
			Strategies for Complex HVAC Systems
