International Conference on Applied Energy

Applied Energy Symposium **MIT A+B 2022**

Co-organized with Harvard
JULY 5-8, 2022 · MIT, Boston, USA

Welcome

Welcome to the Applied Energy Symposium: MIT A+B.

The IPCC report “Global Warming of 1.5°C” (Oct. 2018) issued a dire warning that unless CO₂ emissions are halved by 2030, devastating changes, which will be sooner than expected and irreversible, will occur in ocean and on land. Time is running out for transitioning to new energy systems globally. Logic and numbers show that the world must take a two-step approach: (A) deploy existing, industrially proven technologies, namely solar, wind and nuclear base load at an unprecedented scale and pace, from now to 2050 -- when a house catches fire, firemen must run to the closest hydrants and stop disputing which water stream would be purer; and (B) develop new concepts and technologies that may replace the dirtier parts of (A) post-2050, at terawatt scale.

The Applied Energy Symposium: MIT “A+B” (MITAB) is dedicated to the accelerated deployment of (A), and new concepts and emerging technologies for (B). For (A), reducing capital and operating costs, managing social dynamics, and minimizing environmental impact while maintaining extreme productivity are key; automation, artificial intelligence, social mobilization, governmental actions and international coordination will provide essential boosts. For (B), we seek new concepts and emerging technologies (e.g. fusion power engineering, superconducting transmission, etc.) that stand a chance to scale to terawatts after 30 years, i.e. “baby technologies” can grow to adulthood in 20-30 years. The MIT A+B is organized by Massachusetts Institute of Technology, Harvard University, and Applied Energy Innovation Institute (AEii) jointly.

We look forward to meeting you online.

Chairs of MITAB2022

INTERNATIONAL SOCIETY OF CARBON CAPTURE UTILIZATION AND SEQUESTRATION

Program at a Glance

Day 1: 8:10 AM - 3:40 PM, Tuesday, July 5	
8:00 -8:10	Chair Welcome
8:10-9:00	How Do We View CO2 Capture And Upgrade In A Unified Fashion, And How Can This Drive Innovation?
9:00-9:40	International Green Economy Collaborations
9:40-10:20	Advantages And Disadvantages of Machine Learning in The Power Sector Decarbonization
10:20-11:00	How Can We Accelerate the Improvement of Energy Storage Technologies? Quantitative Insights from Three Decades of Lithium-Ion Battery Improvement
11:00-11:10	Coffee/Tea Break
11:10 AM - 3:25 PM	Carbon Neutrality
11:10 AM - 3:40 PM	Heat Transfer and Building Energy
11:10 AM – 3:40 PM	Power Generator and Distribution
Day 2: 8:10 AM - 3:40 PM, Wednesday, July 6	
8:10-8:50	Developing A Carbon Negative Gas Turbine Based On Chemical Looping Combustion
8:50-9:30	The Green New Deal: Constructing A Climate Security Industrial Complex
9:30-10:10	The Contribution Of Carbon-Negative Oil To Net Zero Pathways
10:10-10:25	Coffee/Tea Break
10:25-11:15	Pathways To The Scalable Electrification And Decarbonization Of Industrial Processes
11:25 AM - 3:40 PM	Hydrogen and Energy Storage
11:25 AM - 3:20 PM	Innovation Now 1
11:25 AM - 3:00 PM	Greenhouse Gas Emission and Storage

Program at a Glance

Day 3: 8:10 AM - 4:30 PM, Thursday, July 7	
8:10-8:50	Community Energy and Social Innovation: The Way for Energy Democratisation
8:50-9:30	Carbon Storage Focused Reservoir Management Of A Mature Indian Oilfield To Respond To Climate Change
9:30-10:10	The Oakland Ecoblock: A Net Zero Block-Scale Urban Retrofit and Community Solar Microgrid
10:10-10:25	Coffee/Tea Break
10:25-11:15	Reinventing Advanced Nuclear Energy: History, Prospects And Path Forward
11:15-12:05	Organic-Based Aqueous Flow Batteries For Grid-Scale Electrical Energy Storage
12:05-12:15	Coffee/Tea Break
12:15 AM - 4:10 PM	Materials
12:15 AM - 4:30 PM	Innovation Now 2
12:15 AM - 4:10 PM	Geo-Energy
Day 4: 8:10 AM - 4:00 PM, Friday, July 8	
8:10-9:00	CCS Scale-Up - Building On Northern Lights And 25 Years Of CO2 Storage In The North Sea
9:00-9:40	Engineering Scalable Electrocatalysts For Affordable Production Of Green Hydrogen & E-Fuels
9:40-10:20	Emerging Trends And Decarbonization Needs For Water – Energy Systems
10:20-11:00	Solar-Thermal Synthesis Of Graphitic Carbon And Hydrogen Via Methane Decomposition
11:00-11:10	Coffee/Tea Break
11:10 AM - 4:00 PM	Energy Economics & Policies
11:10 AM - 3:40 PM	Renewable Energy

Participant's Guide

Presentation

You are required to connect to the Zoom meeting room 15mins before your session starts. It is recommended to download the app of Zoom (<https://zoom.us/>). If you have any trouble with using Zoom, please see: <https://support.zoom.us/hc/en-us>.

Change your user name to your full name and add your paper ID (paper ID is not required for plenary speakers and session keynote speakers);

Please always refer to the latest conference program, which can be downloaded from the conference website <https://applied-energy.org/mitab2022/program>, for actual presentation time.

The links of Zoom will be sent before the opening of the conference and also shown in the below. If you need any help, please do not hesitate to contact us via mitab2022@applied-energy.org.

Conference Zoom link Guideline

Room S (for plenary keynotes and session keynotes):

Passcode: 818605

Plenary Keynotes

How Do We View CO₂ Capture And Upgrade In A Unified Fashion, And How Can This Drive Innovation?

8:10-9:00 AM, Tuesday, July 5

CO₂ capture, especially from dilute sources such as air, will be a key aspect of addressing difficult-to-abate sources of emission. Utilization/upgrade of CO₂, especially approaches that enable its incorporation into carbon-negative (cradle-to-gate) long-lived materials, will be a key element of this strategy, since these will provide economic pull-through of the needed solutions. I will discuss advances in each of these key areas and look at them from an integrated perspective.

Edward H. Sargent

Professor

University of Toronto

Pathways to the Scalable Electrification and Decarbonization of Industrial Processes

10:25-11:15 AM, Wednesday, July 6

Addressing climate change will require decarbonizing the industries which manufacture the material world around us. Of the staggering 33% of global anthropogenic greenhouse gases emissions that arise from the manufacturing of products essential to modern life, nearly half come from just four industries: Cement, steel, ammonia, and ethylene. About 8% (~3 gigatons CO₂ per year) originates from Portland cement production, in which firing of ground limestone (CaCO₃) with aluminosilicates at high temperature results in the stoichiometric emission of CO₂ as well as thermal emissions from burning fossil fuels, primarily coal. Consequently, each kilogram of cement produced emits 0.93 kilograms of CO₂. The rising abundance of very low-cost (but intermittently generated) renewable electricity suggests that new electrical processes could be one pathway to decarbonizing cement production. This talk will discuss an initiative at MIT in which ambient-temperature electrolysis is used to produce acids and bases for the decarbonation of limestone and production of cementitious calcium silicates. Potential applications of the electrolytic approach to materials recycling and mining will also be discussed.

Yet-Ming Chiang
Professor
Massachusetts Institute
of Technology

[Reinventing Advanced Nuclear Energy: History, Prospects and Path Forward](#)

10:25-11:15 AM, Thursday, July 7

Today advanced reactor developers are taking multiple paths and pursuing multiple technology options for advanced nuclear reactors. A subset of these technologies use molten salts, the heat transfer fluid originally selected for the Aircraft Nuclear Propulsion program in the 1950's. While the ANP program was short-lived and attention focused correctly toward reactors for submarines, the attributes required for aircraft propulsion—a very high ratio of reactor thermal power to weight and ability to deliver heat at high temperature—remain attractive attributes for future commercial reactors. This presentation will review the history and recent progress toward development of high-temperature reactors cooled by molten salt, and frame this progress inside to broader set of goals to accelerate the development and deployment of zero-carbon technologies to enable a viable path to net-zero CO₂ emissions.

Michael J. Aziz
Professor
Harvard University

[Organic-Based Aqueous Flow Batteries for Grid-Scale Electrical Energy Storage](#)

11:15-12:05 AM, Thursday, July 7

The ability to store large amounts of electrical energy is of increasing importance with the growing fraction of electricity generation from intermittent renewable sources such as wind and solar. Wide-scale utilization of flow batteries is limited by the cost of redox-active metals such as vanadium or precious metal electrocatalysts. We have developed high performance flow batteries based on the aqueous redox behavior of small organic and organometallic molecules, e.g. These redox active materials can be inexpensive and exhibit rapid redox kinetics and high solubilities, potentially enabling massive electrical energy storage at greatly reduced cost. We have developed protocols for measuring capacity fade rates, which are particularly important for establishing very low capacity fade rates, and have discovered that the capacity fade rate is determined by the molecular calendar life, which can depend on state of charge, but is independent of the number of charge-discharge cycles imposed. We will report the performance of some of the very few chemistries with long enough calendar life for practical application in stationary storage, and on progress in reversing capacity fade by recomposing decomposed molecules.

Plenary Keynotes

CCS scale-up - building on Northern Lights and 25 years of CO2 storage in the North Sea

8:10-9:00 AM, Friday, July 8

CCS is a well-known technology for reducing carbon emissions. Equinor has been the pioneer in the area and established the world's first offshore CCS installation in the Sleipner field in the 1990s. However, the scale-up of CCS is still in the early phase, with many small-scale demonstration projects worldwide. In this presentation, Equinor will discuss the energy trilemma, especially with the impact of the energy crisis after the break of the war in Ukraine. To tackle the energy crisis and climate goal, CCS is a necessary process to scale up significantly than today. Furthermore, we like to share the experiences of establishing large-scale CCS projects targeting to store 30 million tons of CO2 in Norway, the UK, and the USA. In the end, we want to share the learning as an early mover in CCS and our vision of CCS commercialization towards 2050.

1896	Robert L Kleinberg	Methane Emissions From The Oil & Gas Industry Of The Russian Federation
1671	Lukasz Zielinski, Kashif Rashid and Andrew Speck	Key Enablers For Continuous Methane Emissions Monitoring
2648	Ali Toorajipour, Hamed Aghaei, Mehdi Escrochi and Milad Farahani	Optimization Of Pore Compressibility Analysis During Sc-CO2 Exposure And Dissolution
8442	Tugce Baser and Josiane Jello	A Full-Scale Experimental Investigation Of An Advanced Geothermal Energy Storage System
8626	Rukan Chai, Yuetian Liu, Zhenhua Rui and Qianjun Liu	CO2 Utilization And Sequestration In Reservoir: Effects And Mechanisms Of CO2 Electrochemical Reduction
9476	Dhaval Patel, Bhavikkumar Mahant and Rajnish Kumar	Investigation On Synthetic Natural Gas Storage In The Form Of Gas Hydrate

Oral Presentations

Materials

12:15- 4:10 PM, Thursday, July 7

Virtual Room A

Zoom ID: 814 8739 4849

Passcode: 571140

I.D.	Authors	Title
9725	Zishuai Zhang and Curtis Berlinguette	Cement Production In An Electrolyser With Low Carbon Emissions
6113	Bhavikkumar Mahant, Omkar Singh Kushwaha and Rajnish Kumar	Application Of Pnictogen Oxides In Methane Gas Hydrate Formation: An Experimental And Modeling Approach
6095	Antonio Tricoli and Borui Liu	Engineering Dual-Ion Transport Materials For Next Generation High Energy Density Storage (Passcode: nj\$=z02b)
2724	M. Mustafa Azeem, Shiddartha Paul, Daniel Schwen, Michael Short and Kasra Momeni	Role Of Nanovoids In Incoloy-Ni Multilayered Metallic Composites For Advanced Nuclear Reactors
3851	Yangyuan Ji, Matthew Tao, Yuhang Fang, Lamar Mair, Thomas Beechem, David Warsinger and Jeffrey Moran	Self-Propulsion And Photocatalytic Pollutant Degradation By Au@TiO₂ Janus Nanoparticles
1172	Sheikh Akbar	Ceramic Nano-Heterostructures By Materials Design: Platforms For Sensing Applications – Opportunities And Challenges
2376	Peng Wang and Laihong Shen	Exploring The Green Production Of Ammonia Via Microalgae Steam Catalytic Gasification Process Over LaFeO ₃ Perovskite
4338	Bo Hou	Dynamic And Steady-State Investigation Of The Band Energy Distributions And Electronic Properties Of Cu ₂ ZnSnS ₄ And Cu ₂ ZnSnSe ₄ Nanocrystals Utilizing Electrochemical Techniques
4636	Jaroslaw Milewski and Arkadiusz Szczesniak	A Short Review Of Off-Design Parameters Of A Molten Carbonate Fuel Cell
5090	Zheng Liu	Self-Gating In Semiconductor Electrocatalysis
8074	Di Tian and Zhiguo Qu	Electrochemical Condition Optimization And Techno-Economic Analysis On The Direct CO₂ Electroreduction For Flue Gas
8420	Shaoqiang Nie and Meiqian Chen	Evaluation On Hydrothermal Gasification Of Styrene-Butadiene Rubber With Oxidants Via Reaxff-MD Simulation And Chemical Equilibrium Analysis
8972	John Hannon	Novel Catalytic Conversion Of Renewable Alcohols Into Gasoline, Sustainable Aviation Fuels (Safs) Blendstocks And Chemicals (BTEX) To Partially Mitigate Climate Change

Oral Presentations

Innovation Now 2

12:15- 4:30 PM, Thursday, July 7

Virtual Room B

Zoom ID: 830 4605 9257

Passcode: 826058

I.D.	Authors	Title
5366	Nesreen Ghaddar, Kamel Ghali and Jean Paul Harrouz	Novel Concept For Developing Portable Personalized Ventilator With Embedded Air Treatment System To Disinfect, Dehumidify, Cool, And Capture Carbon At Low Energy Cost (A)
5627	Jiaqi Luo, Qiang Zhou and Tao Jin	Suppression Of Rayleigh-Taylor Instability In A Gas-Liquid Standing-Wave Thermoacoustic Engine
7183	Paul Schwarzmayr, Felix Birkelbach, Lukas Kasper and René Hofmann	Development Of A Digital Twin Platform For Industrial Energy Systems
8437	Pei Yong, Audun Botterud, Ning Zhang and Chongqing Kang	Capacity Value Of Demand-Side UPS Storage
6364	Zekai Mu and Xianglei Liu	Axial And Radial Graded Porous Ni Foams Catalyst For Highly Efficient Solar-Driven CO₂ Reforming Of Methane
1817	Sijia Geng, Thomas Lee, Dharik Mallapragada and Audun Botterud	Optimal Co-planning of Distributed Energy Resources for Battery and Hydrogen Electric Bus Fleets
8513	Xiaochen Ma, Wenchao Shi and Hongxing Yang	Effect Of Spray Nozzle Parameters On Surface Wettability And Performance Improvement Of Indirect Evaporative Cooler
6345	Graham Buckley, Iftekhar Hussain and Brian Norton	Trial Of A Thermophotovoltaic Device In A Cement Cool Down Grate
5970	Andrew Zalay	Innovative Concrete Solutions And Civil Construction: MIT Deep Water Offshore Wind Floater Gulf Of Maine
7031	Zixin Wang, Liyan Feng, Dong Zhang, Yuan Fang, Meijia Song and Zhen Gong	Experimental And Numerical Investigation Of The Auto-Ignition Characteristics Of Cylinder Oil Droplets Under Low-Speed Two-Stroke Natural Gas Engines In-Cylinder Conditions
9954	Yaodong Tu and Gang Chen	Experimental Observations Of The Photomolecular Effect
2791	Wei He, Yuanyuan Shi, Jifang Zhang, Hailong Li and Shengchun Liu	Liquid Cooling System Optimization Of Data Center Server By Considering Monthly Ambient Temperature And Humidity
9465	Adam Powell	High-Temperature Electrochemistry for Climate Mitigation
6906	P V Aravind, Vandit Vijay, L J P van den Broeke, Sukesh A, Sachin J Purushothaman, K U K Nampoothiri, Vipin Champatan, C Smit, T D John, Sowmya Shreedhar, Ref Lindeboom, Girigan Gopi, S Pande, Biju Illathukandy, T M Nandakishor and John Posada	Negative Emissions At Negative Cost: The Carbon Neutral Coffee Program From India And Its Global Relevance
2545	Islam Elnaghy, Amr Elbanhawy and Alexander Slocum	Assessing The Potential And Optimal Scheduling Of An Integrated Pumped Hydro Reverse Osmosis System For Egypt
5817 (poster)	Tao Liu and Yiqiang Li	Experimental Investigation Of Oxygen-Reducing Air Huff And Puff Process Based On Three-Dimensional Physical Models

Oral Presentations

Geo-Energy

12:15- 4:10 PM, Thursday, July 7

Virtual Room C

Zoom ID: 828 1037 4805

Passcode: 818605

I.D.	Authors	Title
2513	Hao Chen, Chenghao Xu, Haizeng Yu, Haipeng Liu, Peilin Wei and Chao Zhang	A Method For Screening CO2-Injected Reservoirs Using Machine Learning
2779	Xiliang Liu, Hao Chen, Shenglai Yang and Jin Yang	Dynamic Characteristics Of Reservoir Fluids In Unconventional Oil Reservoirs During Supercritical CO2 Flooding
6100	Xurong Zhao, Zhiming Chen, Kang Tang, Dexuan Li, Duo Chen and Biao Zhou	Simulation Of Huff And Puff And Sequestration Of Supercritical CO2 In Fractured Shale Oil Reservoir
8164	Boyuan Guo, Peng Zhang and He Zhang	Mathematical Modeling Of Heat Transfer From Geothermal Reservoirs To Gas Hydrate Reservoirs
2270	Hao Chen, Yiqi Zhang and Haizeng Yu	Construction, Performance Evaluation And Enhanced Oil Recovery Regulations Of A Multi-Functional Compound Fracturing Fluid System
5263	Ali Toorajipour, Hamed Aghaei, Mehdi Escrochi and Milad Farahani	Effect Of SC-CO2 Injection On Pore Compressibility Of Limestone
3724	Jun Jin, Hong Tuo, Wei Zhou and Hao Chen	Study On Phase Characteristics Of Carboniferous Middle-Deep Near Critical Condensate Gas Reservoirs In Shixi 16 Well Area
4310	Xiaochen Wang, Xinwei Liao, Kang Tang and Peng Dong	Optimization And Evaluation Of CO2 Storage And Enhanced Oil Recovery In Low Permeability Reservoir
4999	Kangping Gao, Xinxin Xu and Shengjie Jiao	Research On Prediction Of Drilling Energy Consumption Based On Mechanism And Data Hybrid Drive
5067 (poster)	Hao Chen, Haipeng Liu, Yi Wu, Xinyu Qi, Chenghao Xu and Chao Zhang	Prediction Of CO2 Flooding Oil Recovery Based On Support Vector Machine
7587	Josiane Jello and Tugce Baser	Repurposing Abandoned Oil And Gas Wells For Geothermal Applications
7661	Lin Jia and Kewen Li	Modelling Of A Retrofitting Methodology To Revive Abandoned Oil Reservoirs For Geothermal Exploitation

Oral Presentations

Energy Economics & Polices

11:10 AM – 4:00 PM, Friday, July 8

Virtual Room A

Zoom ID: 814 8739 4849

Passcode: 571140

I.D.	Authors	Title
2639	Sufang An, Xiangyun Gao, Feng An and Haizhong An	Early Warning Of Critical Transition In Energy And Stock Market
3372	Raquel Alonso Pedrero and Pedro Crespo del Granado	Interactions Between Retailers And Energy Communities: Studying Tariff Subscriptions And Balancing Costs
5342	Shivani Parikh, Mahala Lahvis, Zeyneb Magavi, Parichehr Salimifard, Jonathan Buonocore and Joseph Allen	Understanding Differences In Seasonal Variation By US State: Applications Of The Falcon Curve
6017	Dongwei Zhao, Sarah Coyle, Audun Botterud and Apurba Sakti	Ensuring Social Optimum And Revenue Adequacy: Mechanism Design For Low-Carbon Energy Resources Investment In Deregulated Electricity Markets
6048	Fabio Silva, Castro Soares and Milagre Manhique	Social Innovation For Community Energy In Developing Countries – New Models And A Mozambican Case Study
7729	Florian Siekmann and Sandra Venghaus	Determining Sustainable Transition Paths Using A Multi-Stakeholder Decision Support System
8039	Holger Schloer and Stefanie Schubert	The Food-Energy-Water-Nexus Between Ecomodernism And Degrowth Narrative – A Welfare Economics Model Approach
8302	Francesca Andreolli, Chiara D'Alpaos and Peter Kort	Impact Of P2P Trading On The Decision To Invest In Domestic PV-Battery Systems
474	Sandra Venghaus and Aylin Calik	Resilience Of The European Green Deal In Turbulent Times – The COVID-19 Pandemic
5741	Jasmine Badiee and John Schramski	Energy Investment, Socioeconomic Structures, And Sustainable Energy Systems
9234	Ettore Francesco Bompard, Stefano Corgnati, Antonio Forte, Andrea Mazza, Audun Botterud and Carlo Papa	A Conceptual Framework For Comparing Alternative Commodities In The Energy Transition
6226	Charles Forsberg	What Is The Demand For Low-Carbon Liquid Hydrocarbon Fuels And Feedstocks?
1385	Shiva Madadkhani and Svetlana Ikonnikova	Can Renewable Energy And Carbon Policies Address Security And Affordability Challenges? A Machine Learning Analysis Of The Power Price Dynamics In Germany
584	John Ballantine and Mohammed Almehdar	OPEC Might Be Investing In Our Futures
1719	Robert Hayes	Nuclear Energy As A Safe, Environmentally Friendly And Sustainable Baseload Supply
8468	Xiaowen Kang	Explanation Of The Decision-Making Process Based On The Nested Self-Consistency Principle

Oral Presentations

Renewable Energy

11:10 AM – 3:40 PM, Friday, July 8

Virtual Room B

Zoom ID: 830 4605 9257

Passcode: 826058

I.D.	Authors	Title
2051	Shah Kabir, Jose Benavides, Pushpesh Sharma and Ahmed Al Saedi	Transitioning To Thermal/Solar Energy Resources For Power Generation & Direct Use
5829	Mohammad Ostadi, Leslie Bromberg, Daniel R. Cohn and Emre Gencer	Methanol Production From Synergistically Integrated Natural Gas Reforming And Biomass Gasification
3991	Abhijeet Anand, Ravi Kumar, Vivek Kumar and Priyanka Kaushal	Assessment Of Sugarcane Residues Derived Biochar For Carbon Sequestration In The Soil In India
6172	Yong Hoon Lee, Saeid Bayat and James Allison	Control Co-Design Using A Nonlinear Wind Turbine Dynamic Model Based On Openfast Linearization
6932	Preyashkumar Patel, Rushil Patel, Kavish Shah, Sunil Kale and Paragi Shah	District Cooling System With Solar Based Vapor Absorption Chiller: A Techno-Economic Case Study
7313	Shang Liu and Meng Lin	Mechanistic Understanding Of Coupled Transport Phenomena For Rational Design Of Solar Interfacial Evaporation Devices
9648	Songye Zhu and Jian Zhang	Power Performance Of Wind Turbines In Wake Regions
8145	Robert Brown	Carbon Negative Energy Through Pyrolysis Of Lignocellulose Biomass
8555	Saeid Bayat, Yong Hoon Lee and James Allison	Nested Control Co-Design Of A Spar Buoy Horizontal-Axis Floating Offshore Wind Turbine
2102	Srijoni Banerjee, Arnab Atta and Debabrata Das	Process Parameter Optimization For Microalgal Biodiesel Production In A Biorefinery Approach
4692	Xiaotao Bi, Haoqi Wang and Roland Clift	Optimal Use Of Waste Biomass As A Renewable Energy Source For Meeting 2030 Paris Target
6078	Zhiping Zhang, Fuke Ai, Yamang Li, Zengshe Liu, Qiyu Wu, Zhisai Duan, Hanchuan Liu and Quanguo Zhang	Co-Production Process Optimization And Carbon Footprint Analysis Of Bio-Hydrogen And Bio-Fertilizer From Straw Biomass By Photo-Fermentation
8514	Zhenyi Wang, Jun Cheng, Danni Guo, Lechong Chen, Xuanxiang You and Yang Tang	A Novel Simulation Calculation Model Based On Photosynthetic Electron Transfer For Microalgal Growth Prediction In Any Photobioreactor
8906	Andy Zalay	Walk The Talk: MIT Harvard Campus Powered By A Floating Wind Farm
4117 (poster)	Kuanrong Qiu and Evgueniy Entchev	Biomass-Fired Organic Rankine Cycle-Based CHP For Community-Scale Applications
